

# STK392-040

## 3-Channel Convergence Correction Circuit (Ic max = 7A)

### Overview

The STK392-040 is a convergence correction circuit IC for video projectors. It incorporates three output amplifiers in a single package, making possible the construction of CRT horizontal and vertical convergence correction output circuits for each of the RGB colors using just two hybrid ICs.

### Applications

- Video projectors (high-definition television, high-definition graphic projectors)

### Features

- 3 output amplifier circuits in a single package (22-pin)
- High absolute maximum supply voltage ( $V_{CC}$  max =  $\pm 50V$ )
- Low thermal resistance ( $\theta_{j-c}=1.8^{\circ}C/W$ )
- High temperature stability ( $T_C$  max= $125^{\circ}C$ )
- Separate predriver and output stage supplies
- Output stage supply switching for high-performance designs
- Pins are arranged in separate groups of inputs, supply, and outputs to reduce the adverse effects of pattern layout on characteristics and to make design easier.
- Constant-current circuit in the predriver for stable supply switching operation
- Large lineup of family devices (STK392-000 series) to cover the range from general applications to high-class applications using a single PCB

### Package Dimensions

unit:mm

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

## Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V <sub>CC</sub> max		±50	V
Maximum collector current	I <sub>C</sub>	Tr8, 10, 18, 20, 28, 30	7.0	A
Thermal resistance	θ j-c	Tr8, 10, 18, 20, 28, 30 (per transistor)	1.8	°C/W
Junction temperature	T <sub>J</sub>		150	°C
Operating temperature	T <sub>c</sub>		125	°C
Storage temperature	T <sub>stg</sub>		-30 to +125	°C

Operating Characteristics at Ta = 25°C, Rg=50Ω

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Output noise voltage	V <sub>NO</sub>	V <sub>CC</sub> =±40V			0.2	mVrms
Quiescent current	I <sub>CCO</sub>	V <sub>CC</sub> =±40V	30	90	150	mA
Neutral voltage	V <sub>N</sub>	V <sub>CC</sub> =±40V	-50	0	+50	mV
Output delay time	t <sub>D</sub>	V <sub>CC</sub> =±40V, f=64kHz, triangular wave input, V <sub>OUT</sub> =1.5Vp-p			0.2	μs
Frequency response	f <sub>H</sub>	V <sub>CC</sub> =±35V, -3dB, (0dB at 1kHz), sine wave input, V <sub>in</sub> =50mVp-p		3.8		MHz

Test Circuit

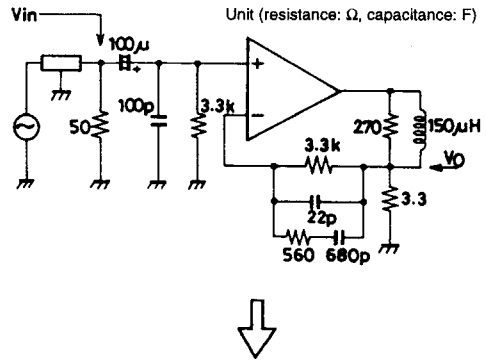

Unit (resistance: Ω, capacitance: F)

A03719

Vo :  $V_{NO}$  is measured by connecting a VTVM.  
 $V_N$  is measured by connecting a DC voltmeter.  
 $t_D$  is measured by connecting an oscilloscope.

Test circuit

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products(including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
