## Introduction

At earlier eighties began a trend to replace a traditional through-hole technique with the surface mounted technology (SMT) using surface mounted devices (SMD). The SMT, although intended in principle for automatic manufacturing only expand more and more, even into a hobby world. This trend will continue, because many new components are available in SMD versions only. The SMT technique opens advantages and new applications through miniaturising of the components and increasing of reliability. The industry standard unfortunately allows that most of the SMD components does not have a clear description. Since a tiny size of the components, they are labelled with one, two or more character or graphic SMD code. Thus it is necessary to take into account that the colour and (or) placing of alphanumeric or graphic symbols are also important. Therefore a sure identification of the components is impossible without appropriate technical documentation. Moreover the polarity and pin - outs of different components could be not identified without data sheets.

Identifying the manufacturers type number of an SMD device from the package code can be a difficult task. Unfortunately, each device code is not necessarily unique.

For various manufacturers it is possible to place different devices in the same case with the same SMD-code. For example, with a **6H** SMD-code in a SOT-23 case might be either a npn-transistor **BC818** (CDIL) or a capacitance-diode **FMMV2104** (Zetex) or a n-channel JFET transistor **MMBF5486** (Motorola) or a npn-digital transistor **MUN2131** (Motorola) or a npn-digital transistor **UN2117** (Panasonic) or a CMOS-integrated circuit- voltage detector with reset output **R3131N36EA** (Ricoh). Even the same manufacturer may use the same code for different devices.

To identify a particular SMD device, is necessary to identify the manufacturer, package type and note the SMD code printed on the device.

The identification of the manufacturer is possible only if on the case are printed the manufacturer's logos, but it not always happens. Besides, sometimes, it is possible to determine the manufacturer with indirect tags. Many recent ON Semiconductor devices have a small superscript letter after the device code, such as **SA<sup>c</sup>** (this smaller letter is merely a month of manufacture code). Infineon devices usually have a lower case '**s**' (**ATs**, **LOs**). NXP (Philips) devices usually have a lower case '**p**' (**AHp**, **Z1p**, **pB0**) or '**'**' (**DQ-**, **-ZS**) for the devices made in Hong Kong, '**t**' (**tT9**, **Y7t**) for the devices made in Malaysia, "**W**" (**WT9**, **Y7W**) for the devices made in China. In section 19 are submitted the logos of the SMD devices manufacturers.

The package type is another problem for the identification of SMD devices. The different manufacturers can designate identical cases concerning by the various standards (or concerning by the internal system). Besides, the various cases can have an identical kind (form) and differ only by sizes. This distinction of sizes so it is not enough, that can be is measured only by special measuring devices.

Compliance with the name and type of cases from different manufacturers is solved by applying in the column "Case" an equivalent type name for equivalent cases.

In addition to SMD-code, upper case may be put padding alpha-numeric information (usually by another font or size of characters, also may be by other arrangement). Relationship position of the SMD-code and padding information have defined as style and show in the column "Style"

In the following tables sections the SMD semiconductor components - irrelevant as to whether it is dealing with transistors, diodes, integrated circuits etc. are placed in separate tables according to numbers of terminals and (or) type of cases and are listed in alpha-numeric order by SMD-codes.

### Column 1 ("SMD-Code")

### Column 2 ("Type")

The type designations correspond to those of the respective manufacturer documentations.

### Column 3 ("Function")

Short definition of the semiconductor component.

Used abbreviations:

BM-IC	Battery Management integrated circuit	LDR-IC	LED driver integrated circuit
BR	Bridge Rectifier	Lin-IC	Linear integrated circuit
C-diode	Capacitance diode (varactor, varicap)	LVR-IC	Linear voltage regulator integrated circuit
CMOS-Log	CMOS logic integrated circuit	LVR/Vdet-IC	Linear voltage regulator/Voltage detector combined integrated circuit
Comp-IC	Voltage comparator integrated circuit	MMIC	Monolithic Microwave Integrated Circuit
DC/DC-IC	DC/DC voltage converter integrated circuit	-MOSFET	Metal-Oxide-Semiconductor FET
ESDP-diode	ElectroStatic Discharge Protection diode	-MESFET	MEtal-Semiconductor FET
ESD-Prot	ElectroStatic Discharge Protection thyristor	n-	n-channel junction transistor
-FET	Field Effect Transistor	n/p-	n-channel and p-channel transistors area
HEMT	High electron mobility transistors	Op-IC	Operational amplifier integrated circuit
H-IC	Hall-effect sensor integrated circuit	p-	p-channel junction transistor
HSPS-IC	High-side power switch integrated circuit	PDS-IC	Power distribution switch integrated circuit
IGBT	Insulated Gate Bipolar Transistor	PHEMT	Pseudomorphic high electron mobility transistors
IGBT+Di	Insulated Gate Bipolar Transistor with antiparallel diode	PIN-diode	Diode with a wide, undoped intrinsic semiconductor region
		PSW-IC	Power Switch IC
		Si-diode	Silicon diode
		SiGe-diode	Silicon/Germanium diode
		Si-npn	Silicon npn transistor
		Si-n/p	Silicon npn and pnp transistors area
		Si-npn-Darl	Silicon npn Darlington transistor

**SECTION 6**

**Additional production data info**

Besides SMD code, the manufacturers can place additional information such as **internal production lot number**, **traceability code**, **data of production**, **assembly location** etc. The additional info is an arbitral position and arbitral content (depending of the manufacturer) and can be alphanumeric symbol (symbols) or graphic symbol.

Below we present some additional info.

### Lot number.

Manufacturer: **Elm (ELM Technology Corporation):**

**Rules 1 (for ODO voltage detectors)**

Symbol 1 - A to Z(I, O, X excepted)

Symbol 2 - 0 to 9

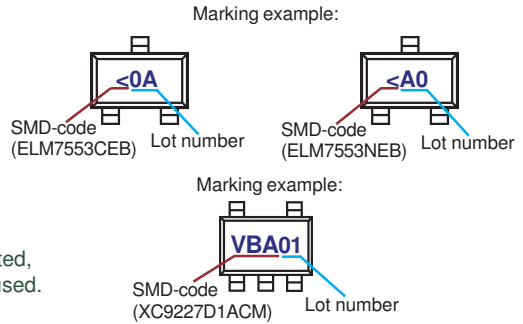

**Rules 2 (for PPO voltage detectors)**

Symbol 1 - 0 to 9

Symbol 2 - A to Z(I, O, X excepted)

Manufacturer: **Tor (Torex Semiconductor LTD):**

01~09, 0A~0Z, 11~9Z, A1~A9, AA~AZ, B1~ZZ repeated,  
(G, I, J, O, Q, W excluded.) \* No character inversion used.

### Production data

Manufacturer: **Anw (Anwell Semiconductor Corp.)**
